

Affordable cyber security-as-a-service solution for enterprises.

We help Companies Protect their Digital Assets & Meet Regulatory Requirements

Regulatory requirements and penalties for non-immediate reporting of consumer data breaches.

Breaches can cause multiple regulatory licenses to be revoked or not renewed

Every IT system and application is vulnerable

Increasing threat with the COVID-19 pandemic, increased reliance on IT systems, and increased work from home.

Tougher to monitor workers, networks are more vulnerable.

Employees of smaller organisations were more likely to be hit by email threats including spam, phishing, ransomware and email malware than those in large organisations.

How To Get Started With Us

Contact the Tabiri sales team via email or phone to arrange a technical demo.

Customer Trial

- Complete our online or offline needs assessment questionnaire to qualify.
- Tabiri remotely deploys its sensors and software agents.
- Qualified customers receive 14 day continuous monitoring free trial and preliminary 14 day report.

Commercial engagement and contract

- Compliance and Technical assessment.
- Cyber security maturity roadmap
- Network, system, and application monitoring for external and internal threats.
- Assistance in the journey to ISO27001 and other enterprise level cyber security certifications.
- Customer-distributor collaboration discussions.

Challenges we are Addressing

- Cyber defenders have to be right 100% of the time, while attackers only have to be right once to break the security chain.
- The typical medium sized business produces tens of millions of network, system, and application logs each month.
- Hiring a team of dedicated cybersecurity professionals to identify, monitor, and remediate threats can be challenging and expensive.
- Remote staff increase the employer's cyber attack surface by exposing companies to threats from home networks.
- Off-the-shelf cybersecurity products still require a team of trained professionals to diagnose and prioritize critical threats.
- Data loss can cause irreparable harm to a company's reputation with its customers, partners, and investors.
- Regulatory requirements around disclosure of breaches of customer data can result in adverse government action, e.g. fines in some industries.

Tabiri's Solution

• Once on your network, cyber attackers have to be right 100% of the time to avoid detection.

• Cyber defenders only have to be right once to catch the attacker.

• Continuous monitoring flips the security equation in your favor.

• Insights from global cybersecurity alert network improve detection.

• Machine Learning improvements help augment our team's capabilities by 10x. • Competitive pricing at a fraction of US competitors.

• Unique access to engineering talent through Carnegie Mellon University.

• Early remediation reduces business impact and potential financial losses.

• Detailed remediation action plan focuses management attention on highest risks.

• Centralized dashboard helps your IT staff track remediation tasks from discovery to closure.

• Automated containment and remediation of threats currently in development.

Our Successful Customer Case Studies

Healthcare Technology Company

Getting attacked by disgruntled employee, didn't know where the breach was.

- Tabiri in under a day from first contact installed it's remote sensors and identified the key breaches

Fintech and Transportation Company

Needed cyber security assessment to capture remote device data fraud.

- Tabiri completed full assessment in **5 days at 90% less** than Indian-based provider saving tens of thousands of USD

Multi-national Telco Partner

Needed comprehensive visibility on its network, server, and applications to meet telco requirements

- Tabiri installed its agents in a complex environment and reported on critical breaches

Managed IT Service Provider

- Improved cyber security posture with **12 months** continuous monitoring service increasing resilience
